

Product information

G Data InternetSecurity 2011

Simple. Secure. Resource Saving.

Alongside improved award-winning virus protection and optimization of the intuitive user interface, G Data InternetSecurity also protects all online activities by means of a "silent" firewall.

This operates invisibly without user-intervention or any loss of computing power. It successfully blocks hackers, viruses and spam. Parental controls offer additional protection.

Includes a year's license inclusive of hourly virus updates, new software updates and version upgrades. With 24/7/365 service hotline.

Maximum security from the record test winner:

- Constant optimum virus detection
- For years, consistently rated as having the quickest response time to new viruses
- The latest methods for detecting unknown viruses (behaviour blocking, heuristics, cloud security)

Simple user guidance - ideal for beginners:

- With new "one click" user interfaces - everything at a glance
- Automatically carries out all protection functions undetected in the background
- Silent firewall without annoying pop ups
